

# FIRST QUARTER 2015 RESULTS

MAY 1, 2015

**AGNICO EAGLE**

# Forward Looking Statements

The information in this presentation has been prepared as at May 1, 2015. Certain statements contained in this document constitute “forward-looking statements” within the meaning of the United States Private Securities Litigation Reform Act of 1995 and “forward-looking information” under the provisions of Canadian provincial securities laws and are referred to herein as “forward-looking statements”. When used in this document, the words “anticipate”, “expect”, “estimate”, “forecast”, “will”, “planned” and similar expressions are intended to identify forward-looking statements. Such statements include without limitation: the Company's forward-looking production guidance, including estimated ore grades, project timelines, drilling results, metal production, mine estimates horizons, production, total cash costs per ounce, minesite costs per tonne; all-in sustaining costs and cash flows; the estimated timing and conclusions of technical reports and other studies; the methods by which ore will be extracted or processed; statements concerning expansion projects, recovery rates, mill throughput, and projected exploration expenditures, including costs and other estimates upon which such projections are based; estimates of depreciation expense, general and administrative expense and tax rates; the impact of maintenance shutdowns; statements regarding timing and amounts of capital expenditures and other assumptions; estimates of future reserves, resources, mineral production, optimization efforts and sales; estimates of mine life; estimates of future mining costs, total cash costs, minesite costs, all-in sustaining costs and other expenses; estimates of future capital expenditures and other cash needs, and expectations as to the funding thereof; statements and information as to the projected development of certain ore deposits, including estimates of exploration, development and production and other capital costs, and estimates of the timing of such exploration, development and production or decisions with respect to such exploration, development and production; estimates of reserves and resources, and statements and information regarding anticipated future exploration; the anticipated timing of events with respect to the Company's mine sites and statements and information regarding the sufficiency of the Company's cash resources and other statements and information regarding anticipated trends with respect to the Company's operations, exploration and the funding thereof. Such statements and information reflect the Company's views as at the date of this document and are subject to certain risks, uncertainties and assumptions, and undue reliance should not be placed on such statements and information. Forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by Agnico Eagle as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The material factors and assumptions used in the preparation of the forward looking statements contained herein, which may prove to be incorrect, include, but are not limited to, the assumptions set forth herein and in management's discussion and analysis (“MD&A”) and the Company's Annual Information Form (“AIF”) for the year ended December 31, 2104 filed with Canadian securities regulators and that are included in its Annual Report on Form 40-F for the year ended December 31, 2014 (“Form 40-F”) filed with the U.S. Securities and Exchange Commission (the “SEC”) as well as: that there are no significant disruptions affecting operations; that production, permitting and expansion at each of Agnico Eagle's properties proceeds on a basis consistent with current expectations and plans; that the relevant metals prices, exchange rates and prices for key mining and construction supplies will be consistent with Agnico Eagle's expectations; that Agnico Eagle's current estimates of mineral reserves, mineral resources, mineral grades and metal recovery are accurate; that there are no material delays in the timing for completion of ongoing growth projects; that the Company's current plans to optimize production are successful; and that there are no material variations in the current tax and regulatory environment. Many factors, known and unknown could cause the actual results to be materially different from those expressed or implied by such forward looking statements and information. Such risks include, but are not limited to: the volatility of prices of gold and other metals; uncertainty of mineral reserves, mineral resources, mineral grades and mineral recovery estimates; uncertainty of future production, capital expenditures, and other costs; currency fluctuations; financing of additional capital requirements; cost of exploration and development programs; mining risks; community protests; risks associated with foreign operations; governmental and environmental regulation; the volatility of the Company's stock price; and risks associated with the Company's by-product metal derivative strategies. For a more detailed discussion of such risks and other factors that may affect the Company's ability to achieve the expectations set forth in the forward-looking statements contained in this document, see the AIF and MD&A filed on SEDAR at [www.sedar.com](http://www.sedar.com) and included in the Form 40-F filed on EDGAR at [www.sec.gov](http://www.sec.gov), as well as the Company's other filings with the Canadian securities regulators and the SEC. The Company does not intend, and does not assume any obligation, to update these forward-looking statements and information. For a detailed breakdown of the Company's reserve and resource position see the Company's press release dated February 11, 2015.

## Note Regarding the Use of Non-GAAP Financial Measures

This presentation discloses certain measures, including “total cash costs per ounce” and “minesite costs per tonne” that are not recognized measures under IFRS. This data may not be comparable to data presented by other gold producers. For a reconciliation of these measures to the most directly comparable financial information presented in the consolidated financial statements prepared in accordance with IFRS and for an explanation of how management uses these measures, see “Reconciliation of Non-GAAP Financial Performance Measures” below. Total cash costs per ounce of gold produced is presented on both a by-product basis (deducting by-product metal revenues from production costs) and co-product basis (before by-product metal revenues). Total cash costs per ounce of gold produced on a by-product basis is calculated by adjusting production costs as recorded in the consolidated statements of income (loss) for by-product revenues, unsold concentrate inventory production costs, smelting, refining and marketing charges and other adjustments, and then dividing by the number of ounces of gold produced. Total cash costs per ounce of gold produced on a co-product basis is calculated in the same manner as total cash costs per ounce of gold produced on a by-product basis except that no adjustment for by-product metal revenues is made. Accordingly, the calculation of total cash costs per ounce of gold produced on a co-product basis does not reflect a reduction in production costs or smelting, refining and marketing charges associated with the production and sale of by-product metals. Total cash costs per ounce of gold produced is intended to provide information about the cash generating capabilities of the Company’s mining operations. Management also uses these measures to monitor the performance of the Company’s mining operations. As market prices for gold are quoted on a per ounce basis, using the total cash cost per ounce of gold produced on a by-product basis measure allows management to assess a mine’s cash generating capabilities at various gold prices. Management is aware that these per ounce measures of performance can be affected by fluctuations in and exchange rates. and, in the case of total cash costs per ounce of gold produced on a by-product basis, by-product metal prices. Management compensates for these inherent limitations by using these measures in conjunction with minesite costs per tonne (discussed below) as well as other data prepared in accordance with IFRS. Management also performs sensitivity analyses in order to quantify the effects of fluctuating exchange rates and metal prices. This presentation also contains information as to estimated future total cash costs per ounce, all-in sustaining costs and minesite costs per tonne. The estimates are based upon the total cash costs per ounce, all-in sustaining costs and minesite costs per tonne that the Company expects to incur to mine gold at its mines and projects and, consistent with the reconciliation of these actual costs referred to above, do not include production costs attributable to accretion expense and other asset retirement costs, which will vary over time as each project is developed and mined. It is therefore not practicable to reconcile these forward-looking Non-GAAP financial measures to the most comparable IFRS measure.

## Note Regarding Production Guidance

The gold production guidance is based on the Company’s mineral reserves but includes contingencies and assumes metal prices and foreign exchange rates that are different from those used in the reserve estimates. These factors and others mean that the gold production guidance presented in this disclosure does not reconcile exactly with the production models used to support these mineral reserves.

# Highlights

- **Record quarterly gold production** – Payable gold production was 404,210 ounces of gold at total cash costs per ounce on a by-product basis of \$588, and All-in sustaining costs of \$804 per ounce
- **Record quarterly precious metal production in Mexico** - Payable gold and silver production was 89,077 ounces and 663,000 ounces respectively. Total cash costs per ounce of gold on a by-product basis averaged \$387
- **2015 guidance reiterated**– Production for 2015 is maintained at approximately 1.6 million ounces with total cash costs on a by-product basis of \$610 to \$630 per ounce and AISC of approximately \$880 to \$900 per ounce
- **Infill drilling at Amaruq continues to yield positive results** – Drilling resumed in late March, and holes drilled from the ice on Whale Lake have yielded promising results including 14.0 g/t gold over 18.9 meters and 15.3 g/t gold over 8.9 meters
- **Drilling at Kittila yields deepest intersection to date and indications of new parallel zone** – Drilling of the Suuri Trend below the Roura area has returned 5.3 g/t gold over 10 meters at a vertical depth of approximately 1.6 km. Drilling has also shown indications of a new parallel zone 150 meters east of the main zone with intersections including 7.0 g/t gold over 7.0 meters at almost 1.3 km depth
- **Continued focus on a strong balance sheet** – In Q1 2015, \$100 million was repaid on the Company's credit facility
- **A quarterly dividend of \$0.08 per share declared**

# Operating Results

Record quarterly production and strong cost performance

	Q1 2015			2015 Forecast	
All amounts are in US\$ (Unless Otherwise Indicated)	Production (Gold oz)	Total Cash Cost* (\$/oz)	Operating Margin (\$000's)	Production (Gold oz)	Total Cash Cost* (\$/oz)
<b>Northern Business</b>					
LaRonde	58,893	\$703	\$30,015	245,000	\$576

<b>Coupon</b>	6.875%	6.875%	6.875%			

# Financial Highlights

Continued strong operating results drive cash flow performance

All amounts are in US\$ (Unless Otherwise Indicated)	Q1 2015	Q1 2014
<b>Realized Gold Price (\$/oz)</b>	<b>\$1,202</b>	\$1,308
<b>Revenues (millions)</b>	<b>\$484</b>	\$492
<b>Earnings (millions)</b>	<b>\$29</b>	\$97
<b>Earnings per share (basic)</b>	<b>\$0.13</b>	\$0.56
<b>Cash provided by operating activities (millions)</b>	<b>\$143.5</b>	\$250.4
<b>Operating Cash flow per share (basic)</b>	<b>\$0.67</b>	\$1.44

An aerial photograph of a large-scale open-pit mining operation. The image shows a vast, terraced excavation site with dark, rocky walls. Several large pieces of heavy machinery, including excavators and haul trucks, are visible on the flat, light-colored floor of the pit. The ground is marked with numerous tire tracks. In the upper left corner, there is a yellow stylized arrow logo pointing towards the right.

**AGNICO EAGLE**

**NORTHERN  
BUSINESS**

## Strong Development Performance Supports 2015 Production Levels

Proven & probable gold reserves (million oz)	Indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
3.4	0.7	1.2	59	\$703

- Work continued on the installation of the coarse ore conveyor system that will extend from the 293 level to the crusher on the 280 level. This new conveyor, which is expected to be commissioned by the end of September 2015, should help mining flexibility and reduce congestion in the deeper portions of the mine
- Studies are progressing to assess the potential to extend the reserve base and carry out mining activities between the 311 and 371 levels at LaRonde

## Vault Optimization Studies on Track for Expected Delivery in H2 2015

Proven & probable gold reserves (million oz)	Measured & indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
1.2	0.8	0.4	89	\$655

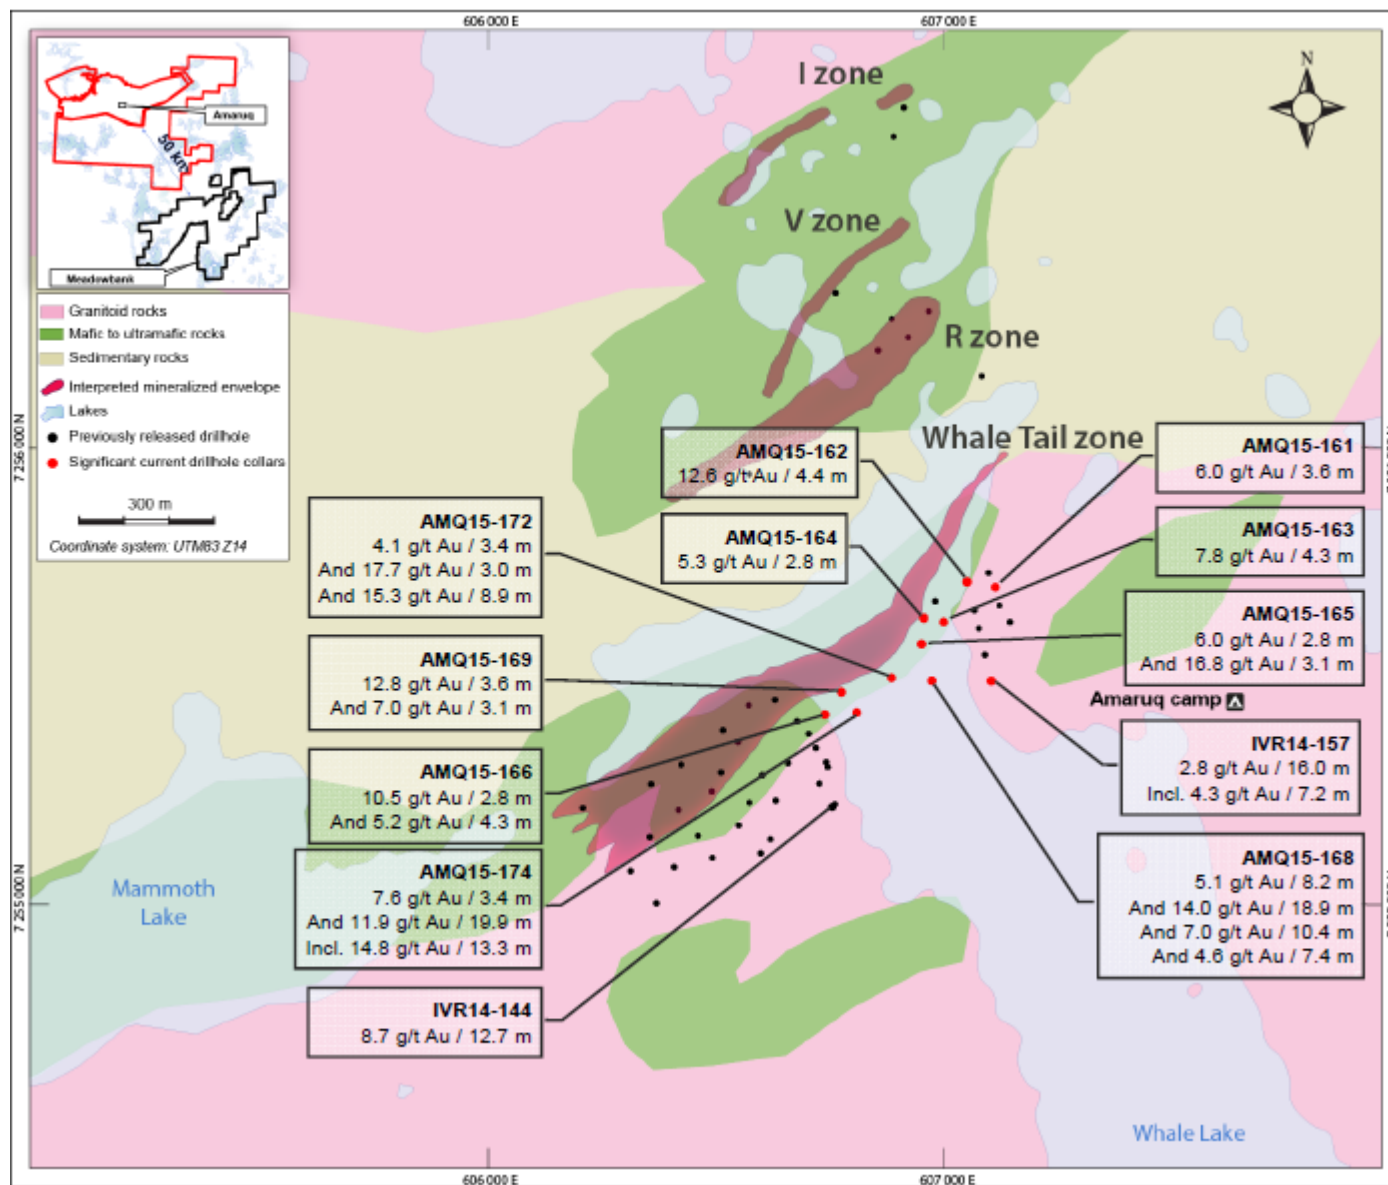

- In 2013, approximately 246,000 ounces were removed from reserves at the Vault deposit due to a change in the gold price assumption used to calculate reserves at December 31, 2013
- Given the current favourable US to Canadian dollar foreign exchange rate and lower fuel costs, the Company is evaluating the potential for a portion of these ounces to be added back into the mine plan at Meadowbank starting in 2017 to extend the mine life

# Amaruq – Highlights From 2015 Drill Program

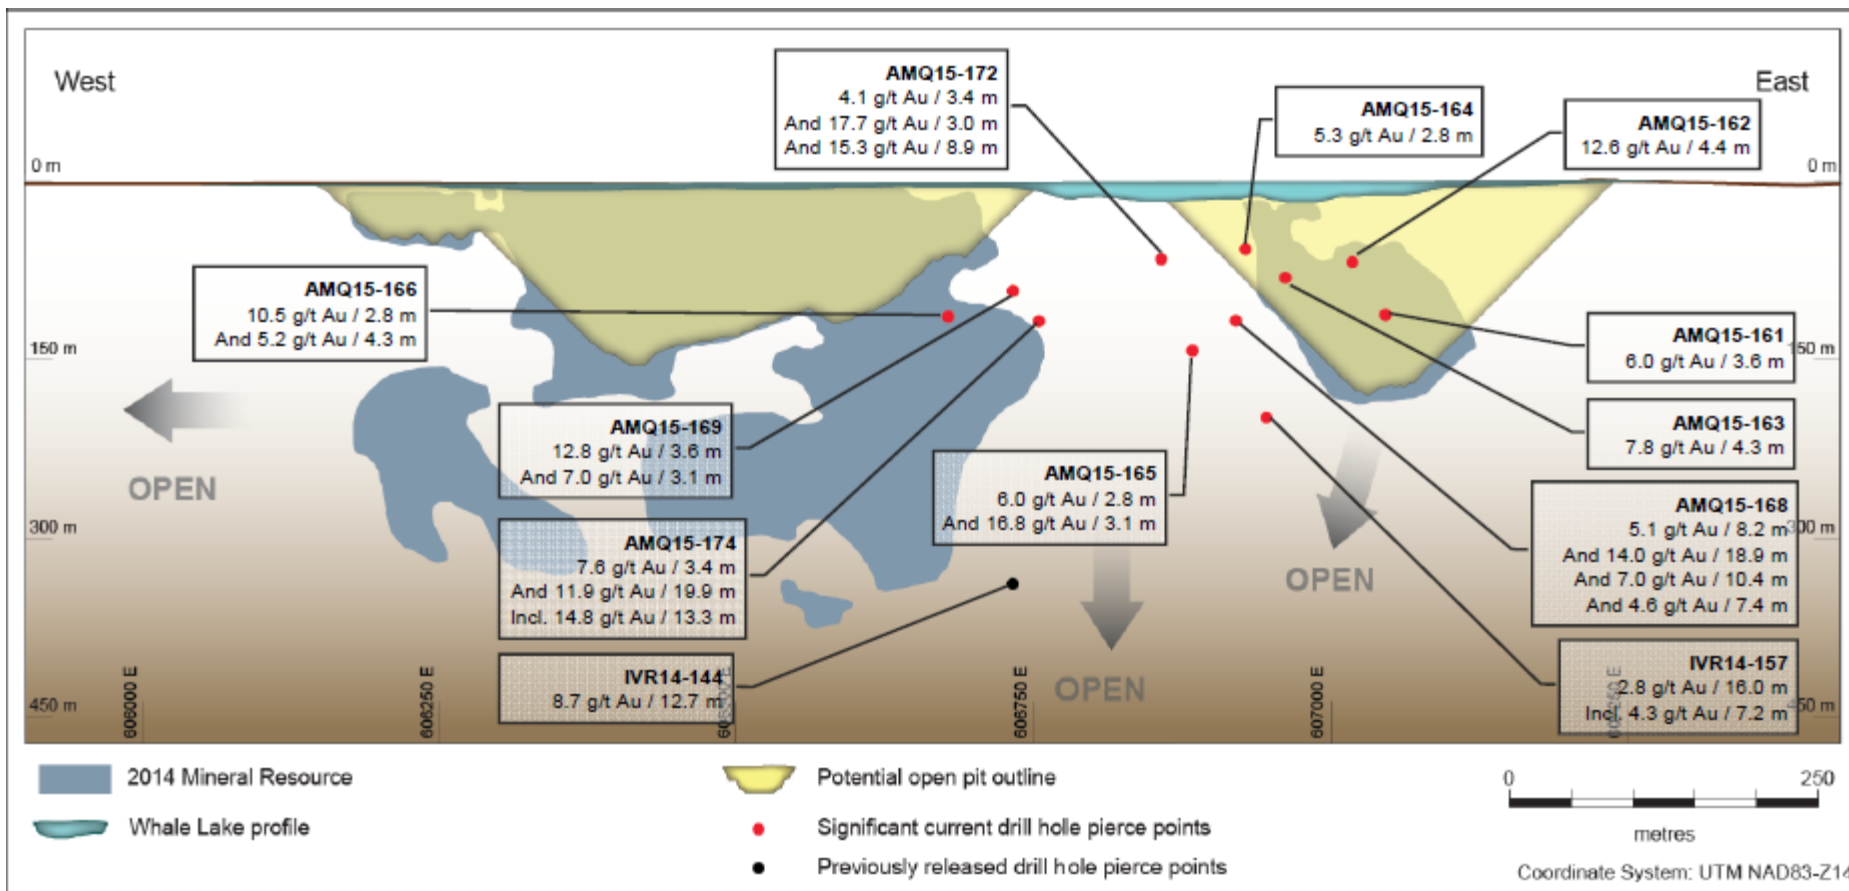

2015 Program Underway, Area Under Whale Lake Yielding Positive Drill Results

# Amaruq – Whale Tail Resource Model

The Whale Tail deposit is continuous over at least 1.2 kilometres strike length and extends from surface to more than 350 metres depth. It remains open at depth and to the southwest

# Canadian Malartic GP (50% Interest)

## Record Gold Production in March

Proven & probable gold reserves (million oz)	Measured & indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
4.3	1.0	0.6	68	\$632

Reserves and resources represent Agnico Eagle's 50% interest as of December 31, 2014

\*Includes 11,878 ounces attributable to AEM post the Osisko acquisition

\*\* Excludes royalties

- Production in March was a record 54,013 ounces (100% basis), largely driven by higher grade ore from the North Zone
- Permitting activities for the Barnat Extension and deviation of Highway 117 are continuing. An EIA was submitted in February 2015, and the first series of questions was received from permitting authorities in mid-April. The process continues as planned
- In March 2015, the Partnership acquired a 100% interest in the Malartic CHL project from Abitibi Royalties Inc. (RZZ:TSX-V) for C\$35 million in Agnico and Yamana shares and a 3% net smelter royalty (NSR). Osisko Gold Royalties (OR:TSX) also holds a 3% NSR.
- Drilling has resumed on the Odyssey North and South Zones, and to date, two holes have been drilled. Data from these two holes is currently being compiled and interpreted

## Deep Zone Development Expected to Accelerate Through Year-end 2015

Proven & probable gold reserves (million oz)	Measured & indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
0.31	2.1	1.5	29	\$541

- The M2 and M5 zones have been added to the mine plan, conversion drilling has been completed on the M3 and M4 satellite zones, and work is underway to incorporate these zones into the reserve base later this year
- Accelerated development of the exploration ramp into the top of the Deep zone continues. In Q1 2015, approximately 1.2 km of development was completed below level 85. This ramp is designed to provide access for additional exploration drilling, with a goal of outlining a mineable reserve and the completion of a technical study by late 2015 or early 2016
- An EIA on the Akasaba West deposit is expected to be submitted in June, which will allow the BAP process to commence. The Company expects the EIA approval in the fall of 2017

## Higher grades and recoveries continue from Zulapa Z7 Zone

Proven & probable gold reserves (million oz)	Indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
0.21	0.1	0.2	26	\$568

- Production in the first quarter of 2015 was higher and costs were lower due to higher gold grades, better recoveries and favourable foreign exchange rates
- An underground drift is being developed from the 101 level of the Lapa mine onto the Pandora property. In 2015, approximately 950 metres of development is planned to be followed by a drill program in Q3 2015
- Additional exploration drilling in the Zulapa Z7 zone at depth and on the adjoining Pandora property could potentially extend the mine life

## Drilling extends Resources to Depth and Outlines a New Parallel Zone

Proven & probable gold reserves (million oz)	Measured & indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
4.5	1.4	1.2	45	\$681

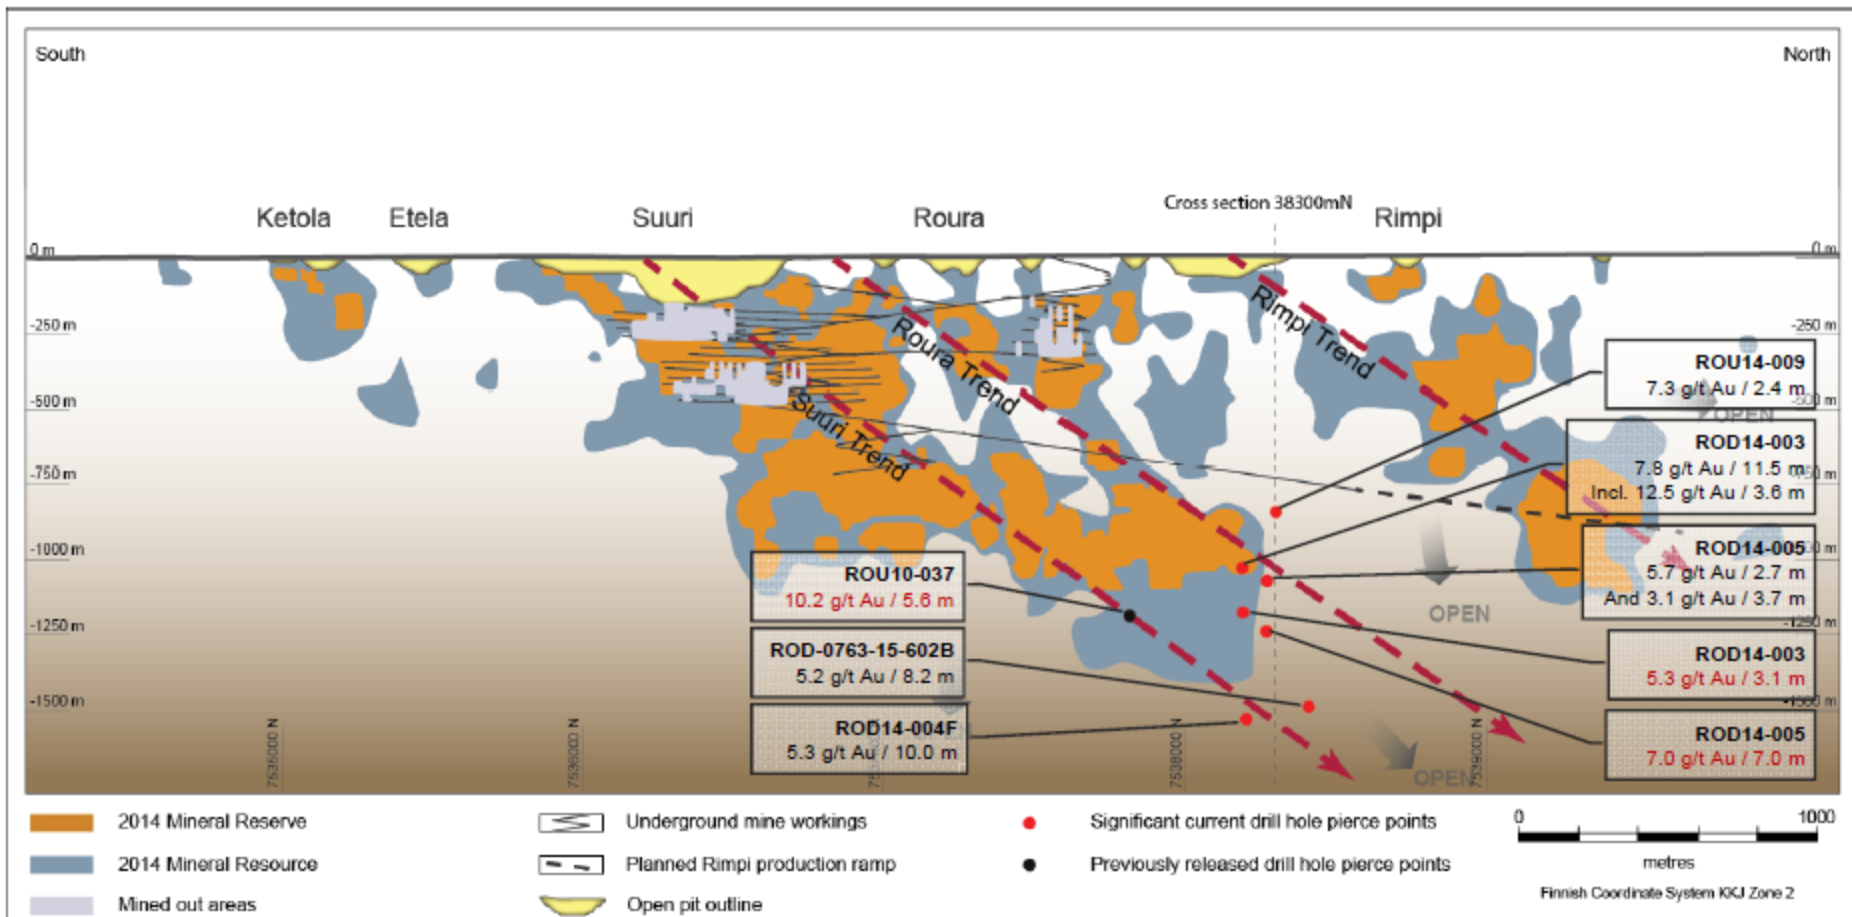

No production in Q2-13 due to scheduled shutdown

- Drilling at Rimpi has outlined significant mineralization with potentially wider widths and better grades than those currently being mined
- The main underground ramp at Kittila is being extended to reach the Rimpi Zone and a new surface ramp is also being developed to access the shallower portions of the Rimpi deposit
- Recent drilling below the Roura area has returned the deepest known intersection to date (~1.6 km depth). Drilling has also shown indications of a new parallel zone 150 meters east of the main zone

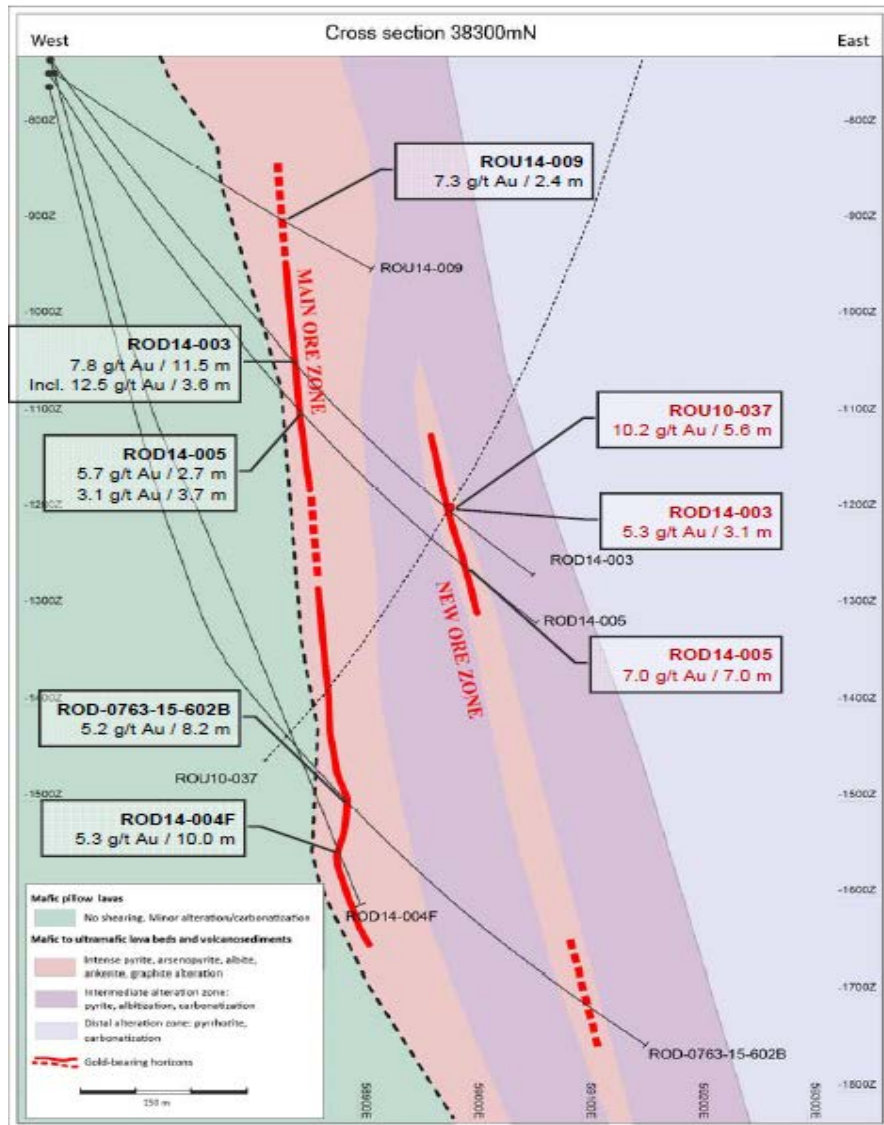

# Kittila – Suuri Trend

Recent deep drilling of the Suuri trend has intersected 5.3 g/t gold over 10 meters at a depth of approximately 1,600 meters below surface

Recent drilling has also indicated the potential for a new parallel zone of mineralization

- A recent hole in this area yielded 7.0 g/t gold over 7.0 meters
- A second underground heavy drill rig will be added to further assess the extent of this new parallel zone
- The new zone is located approximately 150 meters east of the main zone with intersections including 7.0 g/t gold over 7.0 meters at almost 1.3 km depth (ROD14-005)

## Updated NI 43-101 Technical Report Completed, and Project Certificate Received

Proven & probable gold reserves (million oz)

**3.31**

Indicated gold resource (million oz)

**3.3**

Inferred gold resource (million oz)

**3.5**

- On February 26, 2015 the Nunavut Impact Review Board issued the Project Certificate
- On March 12, 2015, the Company completed and filed with Canadian securities regulators an updated National Instrument 43-101 ("NI 43-101") technical report on the Meliadine gold project
- The updated technical study is based on extracting only the current 3.3 million ounces of gold in proven and probable mineral reserves which is all contained in the Tiriganiaq and Wesmeg deposits
- Internal studies suggest that if the mine were to be developed there could be considerably more gold available to be added to the mine plan from the Tiriganiaq and Westmeg/Normeg deposits, which could potentially extend the mine life and increase the after-tax internal rate of return

AGNICO EAGLE

**SOUTHERN  
BUSINESS**

## Strong Performance Driven by Throughput and Higher Grades

Proven & probable gold reserves (million oz)	Indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
<b>1.8</b>	<b>0.7</b>	<b>0.5</b>	<b>50</b>	<b>\$357</b>

- The Pinos Altos shaft sinking project remains on schedule for completion in 2016. At the end of Q1 2015, the shaft had reached a depth of approximately 532 meters, and development activities had commenced on level 27
- A 6,000 metre in-fill and conversion drill program is underway on the Sinter deposit

# Creston Mascota

## Additional Ore Mined Outside of the Block Model

Proven & probable gold reserves (million oz)	Indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
<b>0.2</b>	<b>0.05</b>	<b>0.2</b>	<b>12</b>	<b>\$444</b>

- Geotechnical field work is underway on the Phase 4 leach pad at Creston Mascota
- 5,000 metre infill and conversion drill program is planned on the Bravo Satellite zone.

No production in Q4-12 and Q1-13 due to temporary suspension of Phase one leach pad

# La India

## New Record for Quarterly Gold Production

Proven & probable gold reserves (million oz)	Measured & indicated gold resource (million oz)	Inferred gold resource (million oz)	Production (koz)	Total Cash Costs/oz
<b>0.7</b>	<b>0.73</b>	<b>1.0</b>	<b>27</b>	<b>\$418</b>

- A contractor has been mobilized and earthworks are in progress on the second phase leach pad. This leach pad expansion will provide the capacity for the current planned life-of-mine production at La India.
- An opportunity was identified to develop a previously unknown water aquifer adjacent and downstream from the storm water retention pond at La India. The water well has been completed and initial indications suggest that this new supply could secure supplemental water capacity of 10-20% of the total project requirements at a lower cost
- In the first quarter 2015, the El Realito concession was acquired from Alamos Gold Inc. This acquisition consolidates the land position between the La India and Main Zones, and could provide additional resource potential at La India

AGNICO EAGLE

# SUMMARY

# Future Catalysts

- Expansion of the Vault Deposit at Meadowbank - Potential for a portion of previous reserve of 246,000 oz to be added back into the mine plan starting in 2017 – Decision expected H2 2015
- 2015 exploration programs at Amaruq and El Barqueno
- Development of the Deep Zone at Goldex - Goal of outlining a mineable reserve and completion of a technical study by late 2015 or early 2016
- Rimpi Zone Development at Kittila - Underground ramp is being extended to provide further underground drill access to test for additional depth extensions of the Rimpi, Suuri and Roura mineralized zones
- Recent drilling at Kittila has yielded a new intersection at depth and outlined a new parallel zone. Additional drilling is planned

Indicated Resource	11.9	1.84	0.7
Inferred Resource	12.6	1.22	0.5
<b>Creston Mascota mine</b>			
Proven Reserves	0.2	0.76	0.005
Probable Reserves	5.7	1.27	0.2
Indicated Resource	2.2	0.68	0.05
Inferred Resource	4.5	1.07	0.2
<b>La India mine</b>			
Proven Reserves	0.1	0.53	0.002
Probable Reserves	24.8	0.85	0.7
Measured & Indicated Resource	54.5	0.39	0.7
Inferred Resource	82.6	0.37	1.0

See AEM Feb 11, 2015 press release for detailed breakdown of mineral reserves and resources. Reserves are not a subset of resources.

# Notes to Investors Regarding The Use of Resources

## Cautionary Note to Investors Concerning Estimates of Measured and Indicated Resources

This document uses the terms “measured resources” and “indicated resources”. Investors are advised that while those terms are recognized and required by Canadian regulations, the SEC does not recognize them. **Investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be converted into reserves.**

## Cautionary Note to Investors Concerning Estimates of Inferred Resources

This document also uses the term “inferred resources”. Investors are advised that while this term is recognized and required by Canadian regulations, the SEC does not recognize it. “Inferred resources” have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. **Investors are cautioned not to assume that part or all of an inferred resource exists, or is economically or legally mineable.**

## Scientific and Technical Data

**Cautionary Note To U.S. Investors** - The SEC permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. Agnico Eagle Mines Limited reports mineral resource and reserve estimates in accordance with the CIM guidelines for the estimation, classification and reporting of resources and reserves in accordance with the Canadian securities regulatory authorities' (the "CSA") National Instrument 43-101 Standards of Disclosure for Mineral Projects ("NI 43-101"). These standards are similar to those used by the SEC's Industry Guide No. 7, as interpreted by Staff at the SEC ("Guide 7"). However, the definitions in NI 43-101 differ in certain respects from those under Guide 7. Accordingly, mineral reserve information contained herein may not be comparable to similar information disclosed by U.S. companies. Under the requirements of the SEC, mineralization may not be classified as a "reserve" unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. A "final" or "bankable" feasibility study is required to meet the requirements to designate reserves under Industry Guide 7. Agnico Eagle uses certain terms in this presentation, such as "measured", "indicated", and "inferred", and "resources" that the SEC guidelines strictly prohibit U.S. registered companies from including in their filings with the SEC.

In prior periods, reserves for all properties were typically estimated using historic three-year average metals prices and foreign exchange rates in accordance with the SEC guidelines. These guidelines require the use of prices that reflect current economic conditions at the time of reserve determination, which the Staff of the SEC has interpreted to mean historic three-year average prices. Given the current lower commodity price environment, Agnico Eagle has decided to use price assumptions that are below the three-year averages. The assumptions used for the mineral reserves estimates at all mines and advanced projects as of December 31, 2014, reported by the Company on February 11, 2015, are \$1,150 per ounce gold, \$18.00 per ounce silver, \$1.00 per pound zinc, \$3.00 per pound copper, \$0.91 per pound lead and C\$/US\$, US\$/Euro and MXP/US\$ exchange rates of 1.08, 1.30 and 13.00, respectively.

For the reserves estimate at the Canadian Malartic mine, the Company has decided to continue to report the reserves estimated as of June 15, 2014, reported by the Company in a news release dated August 13, 2014, minus the production to the end of 2014. The assumptions used were \$1,300 per ounce gold, a cut-off grade between 0.28 g/t and 0.35 g/t gold (depending on the deposit), and a C\$/US\$ exchange rate of 1.10.

NI 43-101 requires mining companies to disclose reserves and resources using the subcategories of "proven" reserves, "probable" reserves, "measured" resources, "indicated" resources and "inferred" resources. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

# Notes to Investors Regarding The Use of Resources

A mineral reserve is the economically mineable part of a measured and/or indicated mineral resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at pre-feasibility or feasibility level as appropriate that include application of modifying factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified.

Modifying factors are considerations used to convert mineral resources to mineral reserves. These include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental factors.

A proven mineral reserve is the economically mineable part of a measured mineral resource. A proven mineral reserve implies a high degree of confidence in the modifying factors. A probable mineral reserve is the economically mineable part of an indicated and, in some circumstances, a measured mineral resource. The confidence in the modifying factors applying to a probable mineral reserve is lower than that applying to a proven mineral reserve.

A mineral resource is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling.

A measured mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with confidence sufficient to allow the application of modifying factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing and is sufficient to confirm geological and grade or quality continuity between points of observation. An indicated mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of modifying factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An inferred mineral resource is that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity.

**Investors are cautioned not to assume that part or all of an inferred resource exists, or is economically or legally mineable.**

A feasibility study is a comprehensive technical and economic study of the selected development option for a mineral project that includes appropriately detailed assessments of applicable modifying factors together with any other relevant operational factors and detailed financial analysis that are necessary to demonstrate, at the time of reporting, that extraction is reasonably justified (economically mineable). The results of the study may reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The confidence level of the study will be higher than that of a Pre-Feasibility Study.

The effective date for all of the Company's mineral resource and reserve estimates in this presentation is December 31, 2014. Additional information about each of the mineral projects that is required by NI 43-101, sections 3.2 and 3.3 and paragraphs 3.4 (a), (c) and (d) can be found in the Technical Reports filed by Agnico Eagle, which may be found at [www.sedar.com](http://www.sedar.com). Other important operating information can be found in the Company's AIF and Form 40-F.

The scientific and technical information contained herein has been approved by Daniel Doucet, Senior Corporate Director, Reserve Development, and/or Alain Blackburn, Senior Vice-President, Exploration. Both Mr. Doucet and Mr. Blackburn are designated Ing. with the Ordres des ingénieurs du Québec and qualified persons as defined by NI 43-101.
